PA Cybersecurity Resource Center

Providing small- to medium-sized Pennsylvania businesses the awareness, education, and resources needed to achieve and maintain compliance with cybersecurity standards

Concurrent Technologies Corporation (CTC) has partnered with the Commonwealth of Pennsylvania Department of Community and Economic Development to create a resource for PA businesses to improve their cybersecurity. CTC's trusted advisors provide expert guidance and actionable steps to strengthen PA businesses' defenses against cyberattacks and help them meet a wide array of compliance requirements.

PA Cybersecurity Resource Center services are grant funded and are offered free of charge to Pennsylvania businesses.

continued

Cyber Resiliency and Compliance Services

Cybersecurity Advisory Services

The resource center's subject matter experts evaluate your organization's current cybersecurity capabilities and provide recommendations through the lens of available resources, company size, and compliance. These recommendations can then be used to build a mature cybersecurity capability that will meet regulatory requirements and help your company gain an advantage in securing federal contracts knowing that your requisite cyber hygiene meets DoD standards.

Compliance Services

Cybersecurity Maturity Model Certification (CMMC) Pre-Assessments (U.S. Defense Industrial Base)

The resource center offers CMMC pre-assessments that will help you understand where your compliance gaps are and provide advice on how to close them.

Controlled Unclassified Information (CUI) Program Development

Beyond the technical controls, your company must also have the processes in place to manage CUI from creation to decontrol and finally destruction. We offer guidance on how to create the policies and processes that will help you become and remain compliant.

System Security Plan (SSP) and Plan of Action & Milestone (POAM) Development

An SSP and POAM are essential components of DFARS 252.204-7012 compliance. The resource center assists in development of both, to get your company one step closer to compliance.

Cybersecurity Services

Cybersecurity Assessments

The resource center will provide a comprehensive assessment of your company's security posture based on the CIS Critical Security Controls to pinpoint weaknesses and optimize cybersecurity resources.

Cybersecurity Insurance Readiness Assessments

We will leverage our cybersecurity insurance readiness assessment methodology, which includes known focus areas of insurance risk evaluators to help your organization determine how optimally positioned you are to get the best rates and coverages.

Virtual Chief Information Security Officer (vCISO)

Most small and midsize businesses don't have a full-time IT or cyber staff, let alone a Chief Information Security Officer (CISO) on-staff. This vCISO service provides strategic guidance typically provided by a CISO to company leadership for planning and executing an effective cybersecurity strategy.

Training & Education

SSP & POAM Workshops

The workshop will assist you with the creation of a System Security Plan and a Plan of Actions and Milestones (POAM), which are two of the most critical documents for DFARS 252.204-7012 and NIST SP 800-171 compliance.

Cyber Awareness Training

The resource center training offerings include one-on-one and classroom sessions.
