Policy, Planning and Advisory Support for Energy and Sustainability

Providing Expert Guidance to Help Clients Make Informed and Effective Policy Decisions

Concurrent Technologies Corporation (CTC) is sought for our ability to develop innovative and sound solutions to address complex energy and sustainability issues, present and future. Through collaborative partnerships, in-depth research, strategic planning, and hands-on field experience, we shape energy and sustainability policies and guidance that are both impactful and results driven. CTC's independent and non-profit status enables us to serve as trusted advisors, providing objective analysis and recommendations. We take our role seriously, as our efforts help to safeguard national security by protecting and ensuring the continued function and resilience of installations and assets—including energy, water, utility infrastructure, facilities, networks, data, and information systems—in any operating environment.

Capabilities

- Policy development and analysis
- Program and project management
- Strategic planning and organizational support
- Guidance development and implementation
- Strategic communications, facilitation and training
- Program advisory, operations, and development
- Stakeholder management
- Legislative analysis
- Budget development and cost management
- Operations and process optimization skills

The CTC Difference

- CTC partners with clients to develop strategy, policy, and guidance aligned with current legislation, directives, and instructions.
- We bring research and experience that help decision makers determine strategies to ensure available and reliable utility systems for critical mission requirements.
- We apply data analysis to track progress and demonstrate value of new and existing policies.
- CTC helps organizations craft stories, engage audiences, and harness the power of communication to drive change.
- We collaborate with leaders across functions–and at all levels–to develop holistic solutions to complex issues.
- CTC helps accelerate the implementation of policy and guidance by supporting enterprise business system utilization and data integration.
- We remove roadblocks and anticipate needs, allowing our clients to focus on the bigger picture.

Project Highlights

At CTC, we provide the right people, expertise, and tools through our subject matter experts in energy, water, and sustainability policy. Our unique experiences in DoW energy and water security, cybersecurity, mission thread analysis, and mission critical infrastructure ensures compliance with guidance in developing policy and solutions informed by stakeholders (mission owners, installation leadership, communities, and industry) to ensure available and reliable utility systems for each of the installation's critical mission requirements.

CTC has spearheaded:

- Project Management: Since 2019, CTC has provided advisory services to the Deputy Assistant Secretary of the Air Force for Infrastructure, Energy, and Environment, in close coordination and partnership with the Defense Logistics Agency (DLA) Energy Office, Nuclear Regulatory Commission (NRC), and Department of Energy (DOE) Nuclear Energy Office to demonstrate commercial advanced nuclear reactor technology through a power purchase agreement pilot at Eielson Air Force Base (AFB) in Fairbanks, Alaska
- Strategic Planning: We have extensive experience assisting organizations in vision, design and implementation of energy and sustainability policies. CTC has supported the Air Force energy program at the Secretariate level since its inception and continues to break new ground in support of new policies and initiatives.
- Policy Development: CTC provided exceptional planning, management, analytical, and technical support necessary to execute policy and strategic direction established by Marine Corps Installation Command (MCICOM) Policy Letter 9-19, Installation Energy Security and implement holistic energy security solutions across Marine Corps Installations.
